

# There are mainly two types of filling used in comforters.

The structure varies depending on the type of filling.

- down / feather
- Polyester cotton or wool

## ■ For down

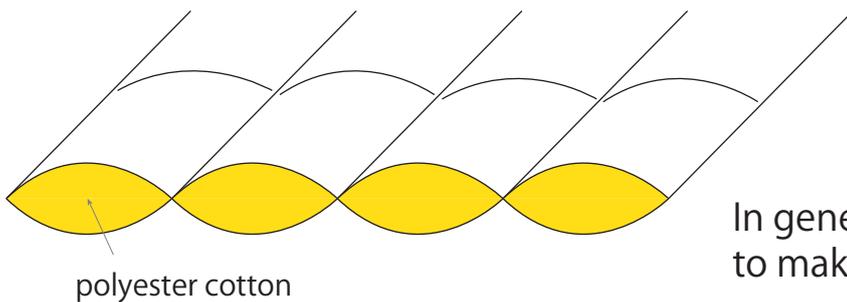

Each compartment is filled with down.

In general, it takes 1 kg of down to make a comforter for one person.

## ■ For Polyester cotton

The padding is quilted between two layers of fabric

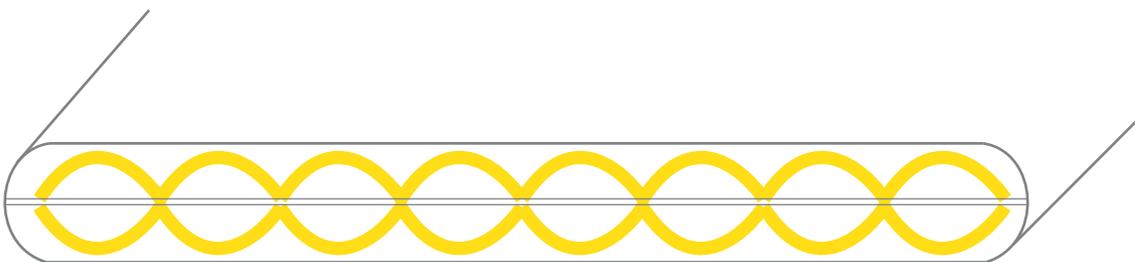

In general, it takes 1.8 kg of polyester cotton to make a comforter for one person.

---

## What is the future comforter?

We have developed a third manufacturing method.

This is a completely new approach that achieves the same level of thermal insulation as conventional products, using inexpensive materials and a simplified structure.

**No more than 0.8 kg of polyester cotton is used !**
